

Issue 10/2018 October 2018

Latest trends

The market is preparing for the Christmas sales period and demand is picking up. Prices are rising both for wild-caught species, such as cod, haddock, herring and octopus, and for aquacultured species such as mussels, oysters and cultured shrimp. Fishing quotas for the most important wild stocks will be reduced in 2019, and this should lead to further price hikes in the opening months of next year. The relatively weak euro is diminishing European importers' ability to compete on the world market, while at the same time Chinese buyers are increasing purchases from all suppliers other than the United States of America due to the ongoing trade war.

GROUNDFISH

In Poland, cod prices have fallen back from the high levels reached last month while in Sweden, haddock prices have increased. In general, prices are trending upward for all types of groundfish products, from fresh to frozen to salted and dried.

The European Fish Price Report, based on information supplied by industry correspondents, aims to provide guidance on broad price trends. Price information is indicative and should be used only for forecasting medium- and long-term trends. FAO is not responsible for any errors or omissions.

Alaska pollock prices are set to increase all across the board, partly as a result of the trade war, but also because fishing has not been as good as anticipated in the Bering Sea. Cod prices are also expected to rise due to expected quota cuts next year in the North Atlantic and the Barents Sea, in addition to very poor fishing off North America's Atlantic coast that is showing no sign of improving.

The end-of-year boost to demand for wet salted cod fillets in Italy is yet to take effect, but

Iceland and the Faroe Islands have started to land good quantities of fresh fish for wet salted cod production and demand is likely to follow in the coming months.

TUNA - BILLFISHES

Tuna prices are on the rise in all major oceans at present, but the FAD closure in both the Western and the Eastern Pacific has now ended and a reversal of the trend is likely in the near future, particularly for skipjack.

The Western and Central Pacific FAD closure ended on 30 September and fishing has improved to moderate-to-good. Carrier landings in Thailand have also increased with some carriers arriving from the Indian Ocean. Raw material inventories at local canneries are moderate. Due to the poor catches during the FAD closure period, skipjack prices have risen sharply in Bangkok. The current level is likely near the peak, however, and prices are expected to start moving down again in the near future as Western Pacific catches reach the market.

Catches in the Indian Ocean have also improved to moderate-to-good although fishing effort is still being reduced due to the yellowfin quota. Raw material inventories at local canneries remain healthy and there has been an increase in carrier transhipment activities with fish cargo being diverted to Bangkok and Ecuador markets. Skipjack prices have risen while those for yellowfin have fallen slightly.

The IATTC 'veda' in the Eastern Pacific ended on 8 October, and while fishing has been moderately good, landings continue to be affected. Even with the continuing carrier arrivals from Atlantic Ocean, Indian Ocean and Western and Central Pacific, raw material inventories at local canneries remain at a low level. Skipjack and yellowfin prices remain high and demand for the processed product remains strong for the time being.

Catches in the Atlantic Ocean have improved to moderate-to-good and raw material inventories at local canneries are healthy. Skipjack prices continue to follow the uptrend in Bangkok while yellowfin prices remain stable. On the European market, meanwhile, prices for both skipjack and yellowfin continue to rise, while the market price for cooked, double cleaned yellowfin loins has also increased slightly.

SMALL PELAGICS

Norway mackerel prices are firming at present, and are likely to rise further on the back of a negative stock survey which will translate into lower catch quotas next year.

Herring supply in Norway in good at present, but the situation is expected to deteriorate next year. It is likely both the North Sea herring and the Norwegian spring-spawning herring quotas will be reduced, which will probably lead to higher herring prices starting in November this year.

CEPHALOPODS

The supply of octopus from Indonesia has begun to increase following the start of the fishing season. However, volumes are likely to be affected by multiple natural disasters in several parts of the country. Overall, global octopus supply on the world market re mains tight and prices are very high. For cuttlefish, weak European demand and average prices are reported. Squid prices from South Africa stay stable, in view of limited catches and coldstorage holdings.

CRUSTACEANS

Disease in Sumatra and Java has impacted Indonesia shrimp production, leading to early harvests and significantly higher prices. Overall production from Indonesia is likely to be lower this year.

Argentine shrimp is in limited supply, at least in comparison with the previous two years. Prices for larger sized shrimp are rising as a result, but prices for smaller sizes have remained stable. At present the differential between the largest and the smallest size is EUR 1.90 per kg, whereas last year this differential narrowed to as little as EUR 0.20 per kg.

In Canada and the United States of

America, the lobster fall season has started and conditions are challenging. Fishing in Maine has been poor, continuing a trend that started some 6 years ago, and this is driving up raw material prices in the United States of America. Demand for lobster tails on the US market is growing and this is also pushing prices up, while lobster meat demand is stable and prices are steady. The US- China trade war has seen higher tariffs applied to China's lobster imports from the United States, and this has led to increased demand for Canadian products. With reduced purchasing power due to a weakened currency, European lobster importers are now losing out to Chinese buyers. In addition, spring lobster inventories are low in Canada and in Europe, and market prices for these products are likely to rise, potentially prompting a switch to American or Caribbean lobster.

Meanwhile, crab prices are expected to remain firm due to poor catches at the beginning of the season and strong international demand.

BIVALVES

The French mussel market is currently comprised mainly of French mussels, both rope and Bouchot, and Dutch bottom mussels. The season for the latter species commenced in early August, around a month later than usual due to slow spring growth. Dutch mussels are smaller this year as a result, but meat content is reported to be good and prices are expected to be

strong.

According to the oyster mortality monitoring bulletin from the French scientific institution IFREMER dated 28/09/2018, the average cumulative mortality rate is 67.5 percent at the national level for seed oysters. Juvenile and adult oyster mortalities are reportedly around 12.1 percent and 9.2 percent respectively. These figures are higher than in 2017 and the tighter supply should see prices remain firm this year.

SALMON

NOK export prices for Norwegian farmed Atlantic salmon were marginally below last year's levels as of week 40. Although there has been significant divergence in price trends across

different sizes, with 7-8, 8-9 and 9+ kg fish still spiking above NOK 80 in late September and early October, Fish Pool Index reports an average export price for fresh whole Atlantics of NOK 54.96 per kg in week 40, compared with NOK 55.23 per kg in the same week in 2017. There has been a steadily decline from the peak of over NOK 80 reached in May this year, broadly following the seasonal trend that is typically observed after summer growth pushes biomass limits and harvest volumes rise. A strengthening of the krone versus the euro has also helped to bring prices down over the third quarter, although krone weakness versus the

euro earlier in the year was a factor behind increased Norwegian exports to the EU market so far in 2018. Poland, France, the UK and Italy in particular have seen significant increases in imports of farmed salmon from Norway this year. Salmon export volumes out of Norway were marginally below 2017 levels throughout September but the total for the first 9 months of 2018 was some 7 percent above the equivalent period last year. Around 641 600 tonnes of this volume was exported as fresh, whole product, making up around 75 percent of the total. In the United Kingdom, spot prices for Scottish farmed Atlantics in early October were approximately on a par with last year's levels, at around GBP 5.60 per kg.

Reports are emerging of biological issues at some Norwegian salmon aquaculture sites and downward revisions of total standing biomass in the pens has limited expectations for future supply growth in Norway. With end-of-year demand expected to kick in over the next month or so, the trend in farmed salmon prices is likely to turn upward in the near future. The average forward price for October as a whole was NOK 55.70 per kg at Fish Pool in mid-October, while the same source reported forward prices of NOK 64.05 and NOK 67.35 for November and December respectively.

TROUT

The supply of Norwegian trout has been more plentiful this year after a couple of years of relative shortage, and price trends are reflecting this development. Prices for fresh whole trout were down to NOK 54.63 per kg in week 39, 4 percent below the same week in 2017. At the same time, exports of trout out of Norway were up by 27 percent in volume terms. In the first 9 months of 2018. Belarus and the United States of America are increasingly important markets for Norway's trout exporters, and their share of total exports has risen this year.

FRESHWATER FISH

Price trends for carp in Hungary are steady at present. Sales campaigns have been launched for some carp products. Demand is expected to increase towards the end of the year, with substantial price increases.

Pangasius imports into the EU continue to decline. Imports into Spain, traditionally the main market of this product declined sharply from 12 600 tonnes in the first half of 2016 to 6 500 in the first half of 2017 and finally to a mere 2 800 tonnes in the same period of 2018. Negative press was the main reason for this sharp drop in imports.

SEABASS SEABREAM

European market prices for farmed seabass are sharply down in October compared with the same month in 2018, as markets struggle to absorb excess quantities of cheap Turkish fish. Greek 300-450 g fresh bass are selling on the Italian market at EUR 4.30 per kg, EUR 0.70 below last October, while bream prices were down EUR 0.10 over the same period. This a continuation of a price trend in 2018 that has been noticeably flat all year in comparison with the typical seasonal pattern which sees restaurant demand lift prices during the summer months.

In addition to large volumes of Turkish exports, additional drivers behind the decline included price а severely lira weakened Turkish and Greek production levels that remain high in 2018 after rising significantly in 2017. Although progress has been made in developing alternative particularly markets, Turkey's case, the sector as a whole is still heavily dependent on the core EU markets of Italy, Spain and France, and available demand is insufficient to cope with such a rapid rise in harvest volumes.

In Turkey, economic conditions are becoming increasingly difficult and the domestic market is suffering, with potentially serious financial implications for the industry there. On the market side, the recent launch of an Aquaculture Stewardship Council (ASC) standard for bass, bream and meagre may help to provide some differentiation in the market and protect business margins.
